A LIST OF EXPERTS CONCERNED WITH THE STUDY OF ALGAE

Prepared by

Fisheries Biology Branch, FAO

FISHERIES DIVISION, BIOLOGY BRANCH
FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS
Rome, May, 1961

PURPOSE OF THIS SERIES

This is one of a series of technical papers in which are listed the names and addresses of persons known to FAO to be conducting research on, or interested in, a particular subject within the general field of aquatic sciences and fisheries research. Each list is extracted from the Register of Experts maintained in Fisheries Biology Branch. This Register consists of a set of edge-notched cards based on Information Forms which have been completed and returned by corresponding scientists. Indexes appended to the list are prepared according to the information entered on the cards, which may be sorted according to place of residence, language facility, subject fields of experience, species group studied and other attributes.

The first version of a list is prepared from names already in the Register of Experts to which are added the authors of documents entered in the Current Bibliography for Aquatic Sciences and Fisheries dealing with the particular subject, as indicated by the Taxonomic and Subject Indexes to that Bibliography.

This first, and each subsequent, version of a list are revised by sending a copy to each person named in it with a request for suggestions for the names of additional persons, to whom information forms are subsequently sent.

Entries in the list are numbered serially, and these numbers are used for reference in the indexes, which follow, where possible, the codes used in the Current Bibliography indexes. The names and addresses are set out in such a way that they can be cut out and used for index cards or mail labels. Extra copies of lists can be obtained by application to

FAO FISHERIES DIVISION BIOLOGY BRANCH DOCUMENTS

Documents other than those prepared solely for FAO internal use are issued by the Biology Branch within two periodicals. They are not official FAO publications; they are given a restricted external distribution and this fact should be indicated if they are cited. Most of them are prepared as working papers for meetings, or are summaries of information for the use of member governments, organisations, institutes and specialists concerned. The periodicals are:

FAO Fisheries Biology Synopsis	FB/S(No.)
FAO Fisheries Biology Technical Paper	FB/T(No.)

Special series of Synopses are identified by the following symbols, which relate to the "Thesaurus" of data from which they are prepared according to standard outlines:

CART Synopses of information concerning the living aquatic resources of certain countries and regions

SAST Synopses of data concerning certain species and fish stocks

MAST Methods and subjects synopses

OT Oceanographic synopses

IT Synopses of data for inland waters

Certain of the Technical Papers are also within special series, thus -

RE Indexed lists of names and addresses of experts drawn from the Register of Experts maintained by Biology Branch

CB Papers relating to the Current Bibliography for Aquatic Sciences and Fisheries and fisheries biological documentation and intelligence services.

Numbers or phrases following the series symbols are for classifying the document, using the codes of the indexes to the "Current Bibliography for Aquatic Sciences and Fisheries".

Some documents may carry other identification numbers, if for example, they have been contributed to a meeting for which papers have been marked according to another system; in requesting copies of documents it is sufficient, however, to quote the "FB" number given at the top right-hand corner of the cover sheet.
